Fabricated by DFI Architectural Signs

Fabricated by Kroy Sign Systems

**NOVACRYL®**  
High-resolution graphics  
and ADA-compliant signage.

## ECR™ series... challenging sign designer's imaginations.

NovAcryl® ECR™, offered exclusively by Nova Polymers, addresses the need for more creative sign solutions by the architectural design and sign fabrication industry. Nova Polymers has partnered with 3form®, recognized worldwide for innovative materials offered to architects and designers, to develop one of the most imaginative product lines ever introduced to the Architectural Signage industry. This new series of sign materials broadly expands the selection of colors, patterns, textures and finishes now available for ADA-compliant sign fabrication.

Nova Polymers bonds its clear photopolymer to 3-form's Varia™ series material to create sign solutions as diverse as your imagination. Sign designers can now custom select the color, pattern, texture, interlayer and finish of the sign material. Swatches on the right are just a sampling of the NovAcryl® ECR™ series. Visit our web site for the complete selection.

Patterns shown below are carried in inventory and ready to ship upon receipt of your order.

**Bear Grass Lt.** 1/8"    **Via Aqua** 1/4"    **Thatch** 3/8"    **Mega Cirque Silver** 1/8"    **Ion Green Tea** 1/16"    **Fossil Leaf** 1/8"

Materials not in inventory require 2-4 weeks for delivery. All ECR materials are available with or without photopolymer and range from 1/8" to 1/2" thickness. Standard sheet sizes are 19" x 24".

NovAcryl® ECR™ is environmentally friendly and user friendly. The unique sign material is processed in plain tap water and bonds to 3-form's EcoResin panels, which are non-toxic and have up to 40% recycled content.
